ABSTRACT

2 A self wiping toiletry device and method of use which utilizes a jaw system and release button
3 to hold and release toilet paper for wiping. The apparatus and method is especially useful for
4 handicapped persons and those having limited use of one or both hands. The apparatus and method
5 in its preferred form easily allows a person to roll toilet paper, install the rolled paper into the jaw
6 system, use the rolled paper to wipe after toilet use, and thereafter easily dispense the soiled paper
7 into the toilet water.
